

ABSTRACT OF THE DISCLOSURE

An image distribution system includes an image storage distribution apparatus for storing images picked up by an imaging unit and an image conversion apparatus for obtaining an image from the image storage distribution apparatus if the image is required by a mobile terminal and then distributing the image to the mobile terminal. In this system, a frame for selecting an image range to be enlarged is displayed on the stored image displayed on the mobile terminal. The frame may be optionally moved or changed in size. With this frame, the desirous range of the image is enlarged multiple times, and the enlarged image is displayed on the mobile terminal.
